INTRODUCTION

The Hochiki range of Addressable (intelligent) and Conventional fire detection products and ancillaries has always set the benchmark for quality and reliability in terms of performance.

But when it comes to fire and smoke detection, ensuring your system also blends seamlessly into the environment is essential. That's why we offer our advanced fire detection products in a range of colour options to suit any setting.

CLASSIC WHITE & IVORY

Our classic white and ivory shades have been the go-to choice for commercial properties for decades. Designed to blend discreetly with most ceiling colours, these products offer an unobtrusive yet highly effective solution for detecting fires and smoke.

The pristine white option provides a crisp, clean look that complements modern interior designs. Suitable for offices, schools, hospitals, and other professional environments, it seamlessly integrates into the architecture.

For those seeking a warmer ambiance, our ivory shade offers a softer, more inviting appearance. Often specified for hotels, upscale homes, and heritage buildings, ivory devices maintain an elegant, sophisticated aesthetic.

BLACK

While white and ivory remain popular picks, our line of black fire detection products opens up new possibilities for distinctive settings and design aesthetics. Created to be as inconspicuous as possible, these black units blend into their surroundings like never before.

In settings where aesthetics are paramount, our black detectors represent the ideal fusion of visual discretion and leading-edge fire protection technology for venues with dark ceilings and moody interiors, such as:

Nightclubs & Bars: Keep occupants and staff safe without obtrusive fire detection devices spoiling a carefully designed interior. The black detectors maintain a low-profile on dark ceilings.

Theatres & Cinemas: Dim the lights and enjoy the show whilst our black units disappear into the shadows of these dramatic spaces but remain constantly vigilant for any signs of fire.

Restaurants & Lounges: Cultivate ambiance with black detectors that integrate flawlessly into any contemporary decor.

Museums & Art Galleries: Let the art take centre stage whilst our black devices stay out of the spotlight in these refined spaces.

SAFETY WITHOUT SACRIFICE

No matter which colour option you choose, you can feel confident knowing our fire detection products deliver uncompromising safety and reliability. Cutting-edge sensors and alarm devices, robust construction, and stringent testing and accreditation to all relevant local regulations ensure every device meets the highest standards.

With white, ivory, and black options available, we have a solution to enhance your environment while providing the ultimate peace of mind. Explore our full range of colour choices today and select the perfect fire protection products for your space.

Hochiki is a wholly independent, multinational, publicly listed group of companies with over 2000 employees working across six manufacturing plants, 38 sales offices and 14 subsidiaries.

One of the world's leading manufacturers of commercial and industrial fire detection and emergency lighting solutions, Hochiki has acquired global acceptance as the benchmark for high-integrity and long-term reliability.

91%
of customer reviews rated our product quality as "VERY GOOD" or "EXCELLENT"

88%
of our customers are extremely likely to recommend our products based on quality

92%
of our customers rated us as VERY GOOD or EXCELLENT.

Hochiki's facilities in Japan, the United States of America and Europe design and manufacture products and provide technical support suited to local standards and customer requirements.

Total commitment to meeting the needs of individual national markets has reinforced the company's global reputation, resulting in Hochiki products being installed in many prestigious sites and in over 80 countries worldwide.

World Class Leaders in Fire Detection Since 1918

Case Study – International Bomber Command Centre, Lincoln, UK

In April 2018, at a cost of £16m, The International Bomber Command Centre was opened at Canwick Hill, just outside the city of Lincoln, a fitting tribute to the men and women, from 62 different nations, who came together in Bomber Command during the WW2 conflict. The site features a visitor centre, memorial gardens and the UK's tallest war memorial standing at 31m (102ft).

Local providers of fire and security systems, Freedom Fire & Security Maintenance Ltd, were brought on board to specify and install a fire alarm system that would offer unparalleled performance without disrupting the aesthetics of this important space.

Freedom Fire opted to use black sensors to minimise their visual presence. The sensors had to be carefully positioned throughout the unusual layout and, having carried out multiple site surveys, Freedom Fire devised a system where both the design and local safety regulations were successfully combined.

“It was a key requirement that black sensors were installed here, to blend into the building fabric and not compromise the overall look and feel of the space.”
