

FIREscapeNepto
Emergency Lighting System

Range Overview

Hochiki is a wholly independent, multinational, publicly listed group of companies with over 2000 employees working across six manufacturing plants, 38 sales offices and 14 subsidiaries.

One of the world's leading manufacturers of commercial and industrial fire detection and emergency lighting solutions, Hochiki has acquired global acceptance as the benchmark for high-integrity and long-term reliability.

91%

of customer reviews rated our product quality as "VERY GOOD" or "EXCELLENT"

88%

of our customers are extremely likely to recommend our products based on quality

92%

of our customers rated us as VERY GOOD or EXCELLENT.

Statistics from the Hochiki customer service survey

Hochiki's facilities in Japan, the United States of America and Europe design and manufacture products and provide technical support suited to local standards and customer requirements.

Total commitment to meeting the needs of individual national markets has reinforced the company's global reputation, resulting in Hochiki products being installed in many prestigious sites and in over 80 countries worldwide.

FIREscapeNepto

Emergency Lighting System

INTRODUCING FIREscape Nepto

FIREscape Nepto is the latest generation of intelligent, self-testing and self-monitoring emergency lighting system from Japanese life safety manufacturer, Hochiki.

This unique, cost effective and fully compliant emergency lighting system is based around an addressable, emergency lighting control panel and features addressable, self-contained LED luminaires and exit signs. These are connected via screened, extra-low voltage (40V) cabling, each with their own intelligent back-up batteries, which can power the devices for the mandatory three-hour duration (as prescribed in BS 5266) in the event of a power failure.

Its extra-low operating voltage together with its ability to continually self-test and monitor itself makes installation and maintenance of the system quick, easy and less costly compared to central battery or mains-powered systems.

DIVERSE PRODUCT RANGE

The flexibility of the FIREscape Nepto range means the system can be designed and configured for any installation. The Nepto control panels can also be networked to protect large, multiple building sites, all from a central point of control.

An extensive range of luminaires consisting of standard, high-powered and recessed complements a full suite of directional, fully BS EN ISO 7010 compliant exit signs to provide emergency lighting to any environment. Photometric data for the FIREscape Nepto units has been third-party approved and verified enabling the installer to design an aesthetically pleasing emergency lighting system which meets all legislative requirements for building-owner's total peace of mind.

The range also includes a variety of accessories, including an input/output unit and a common mounting base for luminaires and exit signs.

ENVIRONMENTAL CONSIDERATIONS - A GREEN SOLUTION

The FIREscape Nepto solution considers the useful life of the entire emergency lighting system, from manufacture and installation, right through to recycling. Produced from fully recyclable materials, and incorporating energy-saving LED technology that helps to reduce CO₂e emissions, FIREscape Nepto's impact on the environment remains at an absolute minimum.

BS 5266
Compliant

BS EN
62034
TYPE PERC

BS EN
60598-2-22

The FIREscape Nepto Emergency Lighting System has a whole host of features and benefits, making it the ideal solution for a variety of environments.

SELF-TESTING

FIREscape Nepto is a fully monitored, self-testing system with addressable devices. The system's control panel continuously monitors the status of the luminaires and exit signs. If there is an uncharged battery or device fault, the system will quickly locate and identify the problem, therefore making maintenance quick and easy.

Plus, completed test reports are stored in the memory of the panel and can be printed for end-user records, as required by EN 50172.

EXTRA LOW VOLTAGE CABLING

The panel is connected to the mains power to monitor for failure, however the cabling that runs between devices is extra low voltage (40V).

This means that the majority of installation and maintenance does not have to be carried out by a qualified electrical engineer; drastically reducing labour costs.

FEATURE RICH

FIREscape Nepto is a feature rich system with adjustable lighting levels, an intuitive graphics package, bi-coloured status LEDs, day and night modes and the ability to program units as maintained or non-maintained.

The wide variety of system features and product accessories, not only helps to make installation simple, but also enables the installer to provide a flexible and cost-effective solution tailored to the requirements of the building and building owner.

COST EFFECTIVE

FIREscape Nepto has been designed to reduce total cost of ownership. The extra low voltage cabling, central monitoring, simple installation and hassle-free maintenance, reduces labour costs.

Plus, the LED luminaires save money on lamp replacement costs, battery replacement and energy efficiency. Over the total life of the system, a building owner can expect to save tens of thousands of pounds.

NETWORKABLE PANELS

Each panel can have two lighting lines with up to 127 devices per line, and up to 12 FIREscape Nepto panels can be networked together.

INTEGRATION WITH BMS AND GRAPHICS

When used in conjunction with third party software, FIREscape Nepto can be connected to a Building Management System or a graphics package.

Having remote central control helps building management to; increase staff productivity, manage maintenance more efficiently, and effectively monitor energy consumption.

Central control is particularly beneficial when working on a large or complex site.

ENVIRONMENTALLY FRIENDLY

FIREscape Nepto's standard LED luminaires consume less than 0.5 W when charging. Once the units are fully charged they only consume 0.1 W.

Even the high-power luminaire consumes less than 0.2 W when fully charged. A similar 8W fluorescent light will typically consume 12 W.

Lower energy consumption directly correlates with lower CO2e emissions; giving the building owner a greener and more cost-effective solution.

FULLY COMPLIANT

All luminaires are certified to BS EN 60598-2-22, BS EN 62034 TYPE PERC.

All exit signs are BS EN ISO 7010 compliant, and the full system meets the requirements of BS EN 5266.

All photometric data and energy efficiency calculations have been verified by third parties and can be found in our FIREscape Nepto catalogue.

Third party approvals confirm that FIREscape Nepto is a high-quality system that will not fail in an emergency, giving building-owners total peace of mind.
